

**VACCINES
KNOWN
TO CAUSE
SEIZURES
ENCEPHALITIS
AUTOIMMUNITY**

The Vaccine Injury Compensation Program (VICP) acknowledges and compensates for adverse reactions known to be associated with certain vaccines. The Vaccine Injury Table includes but is not limited to seizures, encephalitis, autoimmune disorders and death.

Despite these recognized adverse events, many studies have identified additional severe and debilitating conditions resulting from vaccination, that are not compensable through the VICP.
